

“With **TRUEMill**[®], our parts don't get pushed around! We get the benefit of increased material removal without the corresponding increase in tool pressure.”

- James Meggas, Chief Modeling Engineer, Matrix Enterprises

Matrix Enterprises uses SURFCAM for heavy material removal and high speed finishing of models ranging from aerospace to consumer products. Because TRUEMill removes the possibility of full cutter diameter moves, the tendency for their lightly fixtured wood components to shift on the table is eliminated. Leveraging the benefits of TRUEMill is applicable to all materials. Managing tool load isn't just for hard steels.
